### ABSTRACT

*The present investigation was undertaken to study physico-chemical characteristics of ten bore wells from different places from Kolhapur city during post monsoon period of 2011. The parameters such as pH, TDS (Total dissolved solid), total alkalinity, total hardness, chloride, nitrate, and phosphate have been studied. 100% of bore wells (10 out of 10) were with total hardness exceeding the permissible limits. Chloride content in all water samples was within the permissible limits. Nitrate in all samples except B.W.2 (Devkarpanad 37.5mg/L) was within permissible limit. Bore wells having higher total hardness concentration than the permissible limit hence it is concluded that the water is not suitable for drinking purpose.*

**KEYWORDS :** Bore wells, physico-chemical, Kolhapur.

### INTRODUCTION

Rapid urbanization, especially in developing countries like India, has affected the availability and quality of ground water due to its overexploitation and improper waste disposal, especially in urban areas. According to WHO organization about 80% of all the disease in human being are caused by water. Once the ground water is contaminated, its quality cannot be restored by preventing the pollutants from the source.

The water has an important bearing on life of humans and other organisms. Ground water exists as an invisible form and is present the dark pores and fissures of sands and rocks of upper portion of the earth's crust (Kumar et al; 2010). Kolhapur having great heritage and one of the tourist centers in Maharashtra the rainfall is sufficient, but there is short fall of water during summer time. Majority of people are using bore well water for domestic purpose as well as for drinking.

The physico-chemical characteristics of water bodies have been studied by several researchers from time to time (Misha and Tipathi, 2003, Zafar and Sultana, 2008) From Kolhapur bore well water quality parameters are not yet documented.

### MATERIALS AND METHODS

The ground water samples were collected from 10 locations selected of Kolhapur city. The samples were collected monthly for years from sep.2011 to feb.2012 detect noticeable changes in the quality of the ground water. At each sampling station various physical chemical parameters of bore wells water such as pH were recorded. The sample were collected in BOD bottles and analyzed in laboratory for all remaining parameters as described by APHA (2005) and Trivedi & Goel (1986).

### RESULTS AND DISCUSSION

The physico-chemical analysis of the ground water quality. Were with the different variation as Table no.1 to Table no.7

**Table 1 : The pH values of bore well water from Kolhapur city.**

| Sites  | Months    |      |      |      |      |      |      |      |
|--------|-----------|------|------|------|------|------|------|------|
|        | WHO Limit | Sept | Oct  | Nov  | Dec  | Jan  | Feb  | Mean |
| B.W.1  | 7.5       | 6.82 | 6.53 | 6.59 | 6.54 | 6.52 | 6.85 | 6.64 |
| B.W.2  | 7.5       | 7.56 | 7.50 | 7.10 | 7.04 | 6.84 | 7.12 | 7.19 |
| B.W.3  | 7.5       | 6.58 | 6.90 | 6.83 | 6.52 | 6.81 | 6.93 | 6.76 |
| B.W.4  | 7.5       | 7.07 | 7.12 | 7.04 | 7.12 | 6.52 | 7.06 | 6.98 |
| B.W.5  | 7.5       | 7.03 | 7.03 | 7.12 | 6.80 | 7.03 | 7.05 | 7.01 |
| B.W.6  | 7.5       | 7.52 | 7.0  | 7.12 | 6.8  | 7.10 | 7.02 | 7.09 |
| B.W.7  | 7.5       | 6.87 | 6.81 | 6.84 | 7.05 | 6.84 | 6.85 | 6.87 |
| B.W.8  | 7.5       | 6.55 | 6.5  | 6.83 | 6.82 | 6.52 | 6.83 | 6.67 |
| B.W.9  | 7.5       | 7.04 | 6.81 | 7.09 | 6.83 | 7.13 | 7.04 | 6.99 |
| B.W.10 | 7.5       | 6.58 | 7.72 | 7.13 | 7.13 | 7.05 | 6.83 | 7.07 |

**pH :** pH recorded in ground water samples between 6.55 and 7.72 .The water with low pH value below 4 will produce sour test and high value about gives bitter to the test to the water. The pH values of all the samples in the limit. The limit of WHO standard for pH 6.5-9.5.The observed pH of all ten sampling sites indicates good water quality with reference to pH.

**Table 2 : TDS (mg/lit) values of bore well water from Kolhapur city**

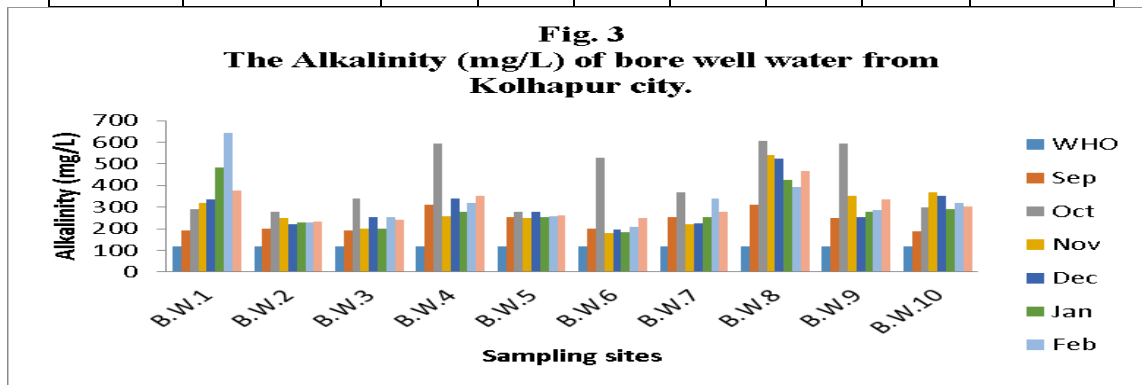

| Sites  | Months    |     |     |     |     |     |     |        |
|--------|-----------|-----|-----|-----|-----|-----|-----|--------|
|        | WHO limit | Sep | Oct | Nov | Dec | Jan | Feb | Mean   |
| B.W.1  | 1000      | 470 | 420 | 430 | 425 | 430 | 450 | 437.5  |
| B.W.2  | 1000      | 280 | 255 | 260 | 300 | 220 | 225 | 256.67 |
| B.W.3  | 1000      | 190 | 160 | 185 | 110 | 160 | 120 | 154.17 |
| B.W.4  | 1000      | 250 | 210 | 265 | 220 | 250 | 220 | 235.84 |
| B.W.5  | 1000      | 320 | 280 | 280 | 250 | 260 | 250 | 27333  |
| B.W.6  | 1000      | 190 | 185 | 185 | 190 | 210 | 220 | 196.67 |
| B.W.7  | 1000      | 120 | 130 | 120 | 120 | 130 | 140 | 126.67 |
| B.W.8  | 1000      | 220 | 240 | 225 | 210 | 225 | 225 | 224.17 |
| B.W.9  | 1000      | 210 | 180 | 225 | 210 | 200 | 210 | 205.83 |
| B.W.10 | 1000      | 470 | 350 | 460 | 328 | 200 | 210 | 336.33 |

**Total dissolved solids (TDS) :** High concentration of TDS in ground water may affect person, are suffering from kidney and heart diseases. The limit of WHO standard for total dissolved solid is 1000mg/L. The given table no.2 observed TDS value ranges from minimum value 120mg/lit.at the site B.W.3 (Jarag Nagar) in the month feb.2012 to maximum value 470mg/L. at the site B.W.1(Near Narke Wada) and B.W.10 (Juna Budhvar Peth) in the month sep.2011

**Table 3 : The Alkalinity (mg/L) of bore well water from Kolhapur city.**

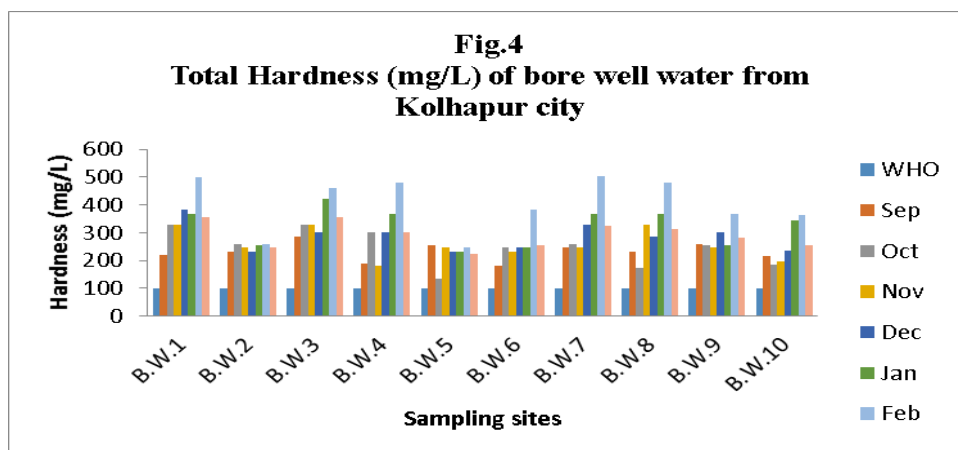

| Sites  | Months    |     |     |     |     |     |     |        |
|--------|-----------|-----|-----|-----|-----|-----|-----|--------|
|        | WHO Limit | Sep | Oct | Nov | Dec | Jan | Feb | Mean   |
| B.W.1  | 120       | 192 | 292 | 320 | 335 | 485 | 645 | 378.17 |
| B.W.2  | 120       | 200 | 280 | 248 | 220 | 229 | 228 | 234.17 |
| B.W.3  | 120       | 192 | 340 | 200 | 252 | 200 | 252 | 239.33 |
| B.W.4  | 120       | 312 | 592 | 256 | 340 | 280 | 320 | 350    |
| B.W.5  | 120       | 252 | 280 | 248 | 280 | 254 | 256 | 261.67 |
| B.W.6  | 120       | 200 | 528 | 180 | 195 | 185 | 210 | 249.67 |
| B.W.7  | 120       | 252 | 368 | 220 | 225 | 252 | 340 | 276.17 |
| B.W.8  | 120       | 312 | 608 | 540 | 525 | 425 | 395 | 467.5  |
| B.W.9  | 120       | 248 | 592 | 352 | 252 | 280 | 285 | 334.83 |
| B.W.10 | 120       | 188 | 300 | 368 | 350 | 290 | 320 | 302.67 |

**Alkalinity :** The alkalinity content ranged between 180mg/L and 645mg/L. (Table no.3). According WHO upper limit of alkalinity is 120mg/L. The entire water sample showed grater values of alkalinity tan the desirable limit. So, from alkalinity point of view quality of water samples of all regions is poor. The same result observed in the study of ground water quality in Atpadithashil Maharashtra. (Shah & Patil, 2007)

**Table 4: Total Hardness (mg/L) of bore well water from Kolhapur city**

| Sites  | Months    |      |     |     |     |     |     |        |
|--------|-----------|------|-----|-----|-----|-----|-----|--------|
|        | WHO limit | Sept | Ot  | Nov | Dec | Jan | Feb | Mean   |
| B.W.1  | 100       | 220  | 328 | 328 | 384 | 368 | 500 | 354.66 |
| B.W.2  | 100       | 232  | 260 | 248 | 232 | 256 | 260 | 248    |
| B.W.3  | 100       | 288  | 328 | 328 | 300 | 420 | 460 | 354    |
| B.W.4  | 100       | 188  | 300 | 180 | 300 | 368 | 480 | 302.66 |
| B.W.5  | 100       | 256  | 136 | 248 | 232 | 232 | 248 | 225.33 |
| B.W.6  | 100       | 180  | 248 | 232 | 248 | 248 | 384 | 256.66 |
| B.W.7  | 100       | 248  | 260 | 248 | 328 | 368 | 504 | 326    |
| B.W.8  | 100       | 232  | 172 | 328 | 288 | 368 | 480 | 311.33 |
| B.W.9  | 100       | 260  | 256 | 248 | 300 | 256 | 368 | 281.33 |
| B.W.10 | 100       | 216  | 184 | 196 | 234 | 344 | 365 | 256.50 |

**Total Hardness :** Hardness in water is due to natural accumulation of salts of mainly calcium and magnesium. According WHO standard upper limit hardness is 100 mg/L. The total hardness of ground water at Kolhapur city sampling sites ranges from 136mg/L to 504mg/L. The site B.W.7 (Sonya Maruti Chawk) was with higher values of hardness than that of the permissible limit of WHO standard. The other all site shows hardness values within the limit. The same result was observed in the study of physico- chemical characteristics of Bore well water in Arsikeretaluka, Hassan, India (Mahesha et.al.2004)

**Table 5 : Amount of Chloride (mg/L)in bore well water from Kolhapur city.**

| Sites  | Months    |       |       |       |       |       |       | Mean   |
|--------|-----------|-------|-------|-------|-------|-------|-------|--------|
|        | WHO limit | Sept  | Ot    | Nov   | Dec   | Jan   | Feb   |        |
| B.W.1  | 250       | 34.03 | 34.00 | 8.06  | 30.03 | 36.06 | 34.03 | 37.707 |
| B.W.2  | 250       | 36.03 | 44.04 | 34.03 | 36.06 | 56.06 | 60.04 | 44.38  |
| B.W.3  | 250       | 30.03 | 36.03 | 32.04 | 44.04 | 36.06 | 34.03 | 35.38  |
| B.W.4  | 250       | 14.00 | 64.07 | 30.03 | 36.03 | 30.03 | 28.03 | 33.70  |
| B.W.5  | 250       | 36.03 | 22.02 | 44.04 | 22.02 | 22.02 | 14.01 | 6.69   |
| B.W.6  | 250       | 30.03 | 22.02 | 44.7  | 30.03 | 22.02 | 20.02 | 28.14  |
| B.W.7  | 250       | 66.03 | 78.08 | 50.05 | 64.07 | 60.04 | 68.07 | 64.40  |
| B.W.8  | 250       | 8.00  | 14.04 | 14.01 | 28.03 | 36.03 | 34.03 | 22.36  |
| B.W.9  | 250       | 30.03 | 12.01 | 14.0  | 16.01 | 12.01 | 16.01 | 16.68  |
| B.W.10 | 250       | 61.98 | 35.98 | 35.99 | 24.89 | 29.45 | 32.77 | 36.83  |

**Chloride :** The chloride content ranged between 86 mg/L to 66mg/L (Table No.5).The maximum limit of WHO standard for chloride is 250mg/L Chloride level in all sampling site

was desirable limit in the water. The same results was observed in the physic-chemical analysis of bore well water samples of Telungupalayam area in coimbatoredistrict,Tamilnadu,India (Shyamala et.al.2008)

**Table 6 : Amount of Nitrate (mg/L)in bore wellsfrom the Kolhapur city.**

| Sites  | Months    |      |     |     |     |     |     |        |
|--------|-----------|------|-----|-----|-----|-----|-----|--------|
|        | WHO limit | Sept | Ot  | Nov | Dec | Jan | Feb | Mean   |
| B.W.1  | 50        | 75   | 55  | 47  | 75  | 75  | 80  | 67.83  |
| B.W.2  | 50        | 45   | 35  | 45  | 30  | 35  | 35  | 37.5   |
| B.W.3  | 50        | 145  | 165 | 95  | 95  | 90  | 85  | 112.5  |
| B.W.4  | 50        | 95   | 140 | 95  | 85  | 110 | 115 | 106.67 |
| B.W.5  | 50        | 80   | 75  | 65  | 75  | 75  | 75  | 74.17  |
| B.W.6  | 50        | 75   | 75  | 65  | 50  | 55  | 35  | 59.17  |
| B.W.7  | 50        | 55   | 90  | 65  | 55  | 65  | 75  | 67.5   |
| B.W.8  | 50        | 75   | 135 | 85  | 115 | 65  | 75  | 91.67  |
| B.W.9  | 50        | 45   | 65  | 65  | 70  | 75  | 115 | 72.5   |
| B.W.10 | 50        | 151  | 122 | 102 | 110 | 151 | 135 | 128.5  |

**Nitrate :** High level of nitrate in bore well water might causes children or blue baby disease in infants developing blue-grey skin. According to WHO the upper limit of nitrate in potable water is 50mg/L. The nitrate concentration of ground water in study area ranges from 30mg/L to 165mg/L The mean value of nitrate except B.W.2 (Devkarpanand) was 37.5mg/L which was in permissible limit.

**Table 7 : The amount of phosphate (mg/L) of bore well water from Kolhapur city.**

| Sites  | Months    |       |       |       |       |       |       |       |
|--------|-----------|-------|-------|-------|-------|-------|-------|-------|
|        | WHO limit | Sept  | Ot    | Nov   | Dec   | Jan   | Feb   | Mean  |
| B.W.1  | 10        | 0.408 | 0.570 | 0.560 | 0.567 | 0.570 | 0.585 | 0.543 |
| B.W.2  | 10        | 0.045 | 0.065 | 0.055 | 0.060 | 0.065 | 0.065 | 0.059 |
| B.W.3  | 10        | 0.055 | 0.063 | 0.065 | 0.045 | 0.040 | 0.065 | 0.055 |
| B.W.4  | 10        | 0.060 | 0.061 | 0.065 | 0.063 | 0.061 | 0.060 | 0.061 |

| B.W.6  | 10        | 0.290 | 0.391 | 0.280 | 0.340 | 0.345 | 0.360 | 0.334 |
| B.W.7  | 10        | 0.390 | 0.408 | 0.380 | 0.391 | 0.400 | 0.410 | 0.397 |
| B.W.8  | 10        | 0.175 | 0.207 | 0.190 | 0.205 | 0.210 | 0.210 | 0.199 |
| B.W.9  | 10        | 0.480 | 0.568 | 0.510 | 0.520 | 0.535 | 0.565 | 0.530 |
| B.W.10 | 10        | 0.290 | 0.295 | 0.310 | 0.327 | 0.310 | 0.330 | 0.310 |

**Phosphate :** Phosphate is an essential nutrient for growth and development of flora in any ecosystem. The mean value of phosphate recorded at different sampling sites in Kolhapur city are observed Table No.7 The upper limit of phosphate 10 mg/L according to WHO all the water samples at study sites showed lower values of phosphate than the WHO limit . Phosphate in small quantities is not harmful to the organism.

### CONCLUSION

Total Hardness of 100% sampling sites exceeds the permissible limit of WHO (2<sup>nd</sup> Ed., 1993) and makes the water unfit for human consumption. It can be used for drinking only after pretreatment like filtering, boiling, reverse osmosis & electro- dialysis. Nitrate content in water of the study is higher than the permissible limit due to sewage contamination. At some sites, the ground water samples contain high concentration of alkalinity, nitrate, and hardness, TDS than the permissible limits. The analysis reveals that the ground water of the area needs some treatment before consumption and it also needs to protect from the contamination of water.
